

Grazing Management CSP Enhancement

Conservation Practice Job Sheet

- ☐ Improve livestock distribution and subsequent forage utilization through proper trail and walkway placement.

The construction of animal trails, walkways, or lanes which are used in grazing systems, providing access to pastures used in a grazing system. Creation of specific trails or walkways may reduce the extent of soil compaction, effects on infiltration and reduce soil losses through erosion. Trails, corridors and walkways are commonly used in intensively managed improved pasture grazing systems.

Animal walkways shall be constructed and maintained as needed to facilitate livestock movements in a manner that reduces the extent of soil compaction and the effects on infiltration and reduce soil losses through erosion.

Use the following table for documentation and attach a plan map showing the location of the trails or walkways.

An example is provided to assist you.

Farm #	Field #	Acres in Field	Year Constructed	Year Maintained
334	Field 9	13.5	2005	2006
